

TAKE AWAY THEIR PAIN WITHOUT THE HARMFUL SIDE EFFECTS

Low level laser therapy (3LT[®]) has been proven to promote bone repair, wound healing, reduction of inflammation and tendon/ligament repair. Although each application can seem drastically different, the need for energy and stimulation of basic molecules is the same. Low level laser therapy (3LT[®]) has been shown to stimulate osteoblast, fibroblast, stem cells, skin tissue, nervous tissue, immune cells and a wide assortment of other tissue structures and cells.

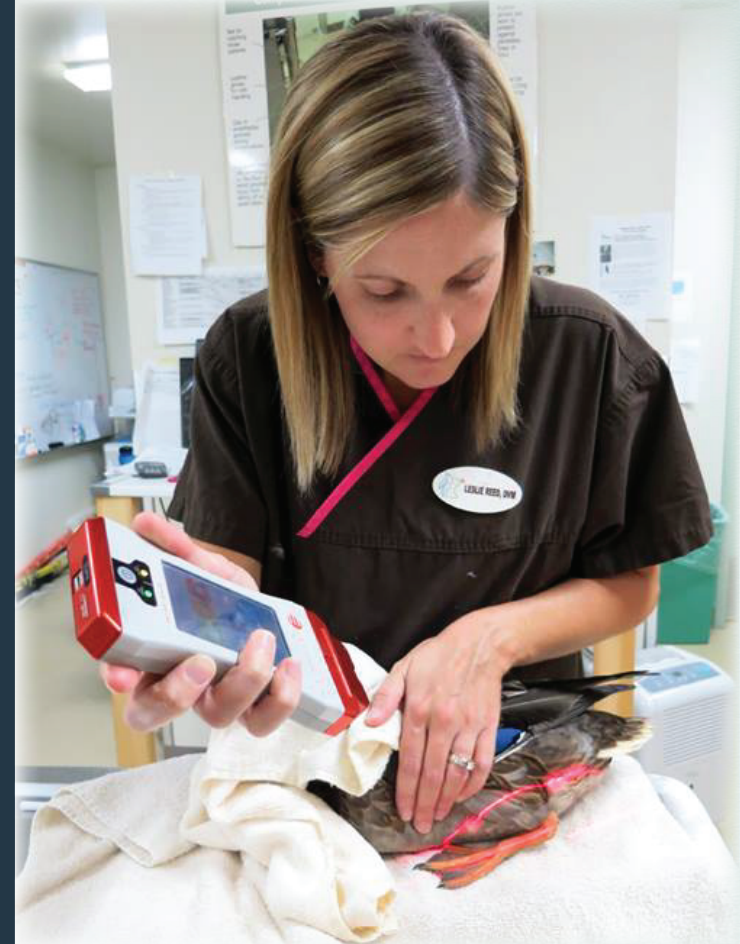

Targeting these cells can promote the release of important molecules that support increased blood flow, collagen synthesis, cell recruitment, mineralization, skin cell replication, nerve tissue regeneration, reduction of scar tissue and tissue repair. Each advantage originates from the laser's capability of influencing the energy production of cells (ATP), which is necessary to drive reactions to produce the outcomes mentioned above.

Most non-steroidal anti-inflammatory drugs (NSAIDS) attempt to suppress the mechanism responsible for producing a key immunologic molecule that promotes an inflammatory response and can further damage tissue and impede the rate of healing.

Although NSAIDS have been used for many years and their effectiveness is well documented, there are many patients in which they may be contraindicated or simply pet owners may wish for an alternative.. The same mechanism these medications and drugs attempt to suppress, low level laser therapy has been proven to do the same but on a local level and more importantly bypassing the digestive system. Although it may sound easier to simply provide a NSAID for pain relief, the only

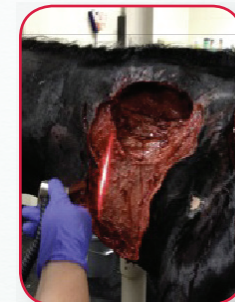

capability they have is just that, reduce pain and inflammation. Symptomatic presentation of pain is only the superficial issue and the result of mild or serious tissue injury. Low level laser therapy (3LT[®]) is the tool that can not only suppress inflammation and pain but also stimulate the aforementioned cells to address the underlying problem and promote a healing environment. Suppression of pain is important, but just as important is the healing of the injured tissue, and low level laser therapy has proven to do both. This also has an added benefit of enhancing the effects of NSAIDS in patients where both tools can be used together. Furthermore there are endless opportunities to use 3LT to enhance the benefits of traditional medical therapies..

- ▶ **Erchonia's custom fear-free laser protocol**
- ▶ **Anti-bacterial, ear infections & skin allergies**
- ▶ **Chronic non-healing wounds**
- ▶ **Chronic joint pain**
- ▶ **Muscle strains and tears**
- ▶ **Degenerative conditions such as navicular syndrome**
- ▶ **Post surgical pain**
- ▶ **Tendon and ligament injuries**
- ▶ **Bone fractures**
- ▶ **Hip dysplasia**
- ▶ **Feather picking**

AMAZING RESULT!

15 year old, quarter horse paint mare
Diagnosis: Bacterial Myositis resulting from a severe neck wound

1st Laser Treatment Post Removal of Dead Infected Tissue

10 Weeks Post Injury

NON-INVASIVE, DRUG-FREE CARE FOR EQUINE, CANINE, FELINE AND EXOTIC ANIMALS.

It is not uncommon for a pet or trusted animal companion to become a part of the family or transition into a trusted work partner, and as owners we attempt to provide as much as we can to ensure the quality of their health and preserve vitality and energy. The medical disorders that plague us are not that dissimilar to those that affect our animal companions.

Fortunately, a trusted technology, one that has earned Food and Drug Administration market clearances to treat human chronic neck and shoulder pain, the treatment of acne, pain associated with liposuction, post-operative surgical pain and inflammation during breast augmentation, non-invasive body contouring and target onychomycosis is now available for the treatment of a wide-assortment of medical conditions that may be affecting many of your animals.

- ▶ CANINE
- ▶ FELINE
- ▶ EQUINE
- ▶ EXOTICS

THE SAFEST AND MOST
EFFECTIVE, NON-INVASIVE
TREATMENTS AVAILABLE!

Your Best Friends,
Deserve the
Best Treatments.
